

**The digital multichannel MDR recorder is an archiving device for voice recording.**

**Depending on its configuration, it can be equipped with up to 128 analog modulo 8 channels, 64 ISDN channels (T0 / S0) or 120 digital inputs (4 x PCM PCM) and an immediate replay function.**

## Features

- Time synchronisation,
- New modern intuitive interface, user-friendly and easy to learn,
- Creation of comments, communications analysis,
- Indexing of channels by usernames,
- Archiving open NAS/SAN server,
- Multi criteria of research,
- Mixing analog ways, digital, RNIS, VoIP,
- HDD Serial ATA, Open TCP/IP administration (SSD in option),
- Microsoft Windows XP Pro/server, Windows 7 environment
- ASSMANN, Wav, Mp3 Extraction formats
- SQL server Base integrated,
- Compatible with all digital telephony manufacturers
- Full IP software.

\* Noncontractual photos

Thanks to its architecture and its many possibilities of adjustment and configuration, the MDR can suit almost all PABXs / Autocuts. The MDR system has an open architecture and can be extended and updated at any time.

All the recordings are placed on a hard disk buffer, and then they are copied to the recording medium with a short offset time.

This ensures that no data is lost when changing the recording medium.

#### AGRÉMENTS :

- Ministry of Defence
- Ministry of Internal Affairs
- Training organisation
- Ministry of transports
- ANTARES Compatible

## Capacity / Archiving

- Expandable intern capacity of recording.
- RAID1 ou RAID5 native.
- Intern archiving on one or two DVD RAM Burner last generation
- Extern archiving on network LAN system, storage linked to network (NAS, SAN...)
- SQL intern base to manage more than 4 000 000 recordings.
- Legal duration of message Management by Times to Life by chanel.
- Message export under different formats : ASSMANN, .WAV ou MP3.

## Research and reading

- Listening in real time or delayed, simple or multiple, creation of replay scenario.
- Multicriteria research, more than 20 different choices : Track name, duration, Phone number, time slots,...
- Research and reading on RI plug, local DVD or through Lan network or web interface.
- Specific interface network for emergency dispatchers.

## Interface

- Windows XP Pro or Windows 7 operating system.
- Convivial interface with contextual menu of help.
- Management of access by password with different right levels : Listening, technical management, or other..
- Local administration or off-set through Lan or Web Interface.
